## **Reliance Gold Project, BC Conclusions and The Future**

- 1. An outstanding New Exploration Discovery in an historically productive multi-million ounce Orogenic Gold Camp.**
- 2. Wide pervasive iron-carbonate sericite alteration, sulphidization, breccia, and antimony indicate an “Epizonal” Orogenic setting in a “brittle” structural regime – Epizonal comparables to Fosterville, Australia and recent Newfoundland discoveries.**
- 3. Model provides potential for a major gold system with depth continuity.**
- 4. 2021 Drilling assay results delivering excellent intersections.**
- 5. The Eagle Zone and Eagle Area is now over 400 m and still open based on surface results and shallow drill intersections.**
- 6. Year round access provides potential for a drilling program throughout 2022 – possibly commencing in March or April.**
