Reliance Gold Project Program Highlights - To Date

32 km of diamond drilling has delivered a significant high-grade gold discovery in a easily accessible productive Gold Camp

Gold system is now over 1.5 km of trend and 1.1 km vertically – Excellent hit statistics

2025 drilling confirms Eagle and Imperial are the same structural envelope with Crown intersections of 7.61 gpt gold over 5.7 m & 8.01 gpt gold over 10.5 m

3D modelling complete and Independent MRE and metallurgy in progress

2024 Drill Discovery of the Lower Imperial with 7.18 gpt Gold over 8.3 m – opens potential for “wide open” parallel structure & the deepest gold intersection to date

2025 New Targeting successful – new Au-Sb bedrock targets discovered/expanded.

Finalized 100% ownership – maximum 1% NSR after optional buydown

Project Costs to date less than \$15 million after Tax Credits - low unit discovery metrics?

Reliance Gold Project, BC Conclusions

- An outstanding New Exploration Discovery in an historically productive multi-million ounce Orogenic Gold Camp.
- Wide pervasive iron-carbonate sericite alteration, sulphidization, breccia, and antimony indicate an “Epizonal” Orogenic setting in a “brittle” structural regime – Epizonal comparables to Fosterville, Australia and Newfoundland discoveries.
- Model provides potential for a major gold system with depth continuity.
- Drilling has delivered a high percentage of significant and excellent gold intersections with associated antimony.
- Deposit extends **1.5 km laterally X 1.1 km vertically**. Eagle, Crown & Imperial confirmed as continuous structural regime
- Inaugural Mineral Resource & Metallurgy Expected Soon – Major Milestone
- Parallel & on-Strike structural trends developing as high priority drill targets
